

TradeTide

A Financial AI System

Advait Ashtikar

Andy Chen

Alexander Goferman

TradeTide – The Idea

- AI system that analyzes **market sentiment** and retrieves similar historical events
- Generates scenario-based **stock outlooks**

The Insight – Users

- Who needs this product?
 - Retail investors
 - Data analysts
 - Financial researchers
- Turn financial news into historical **context**

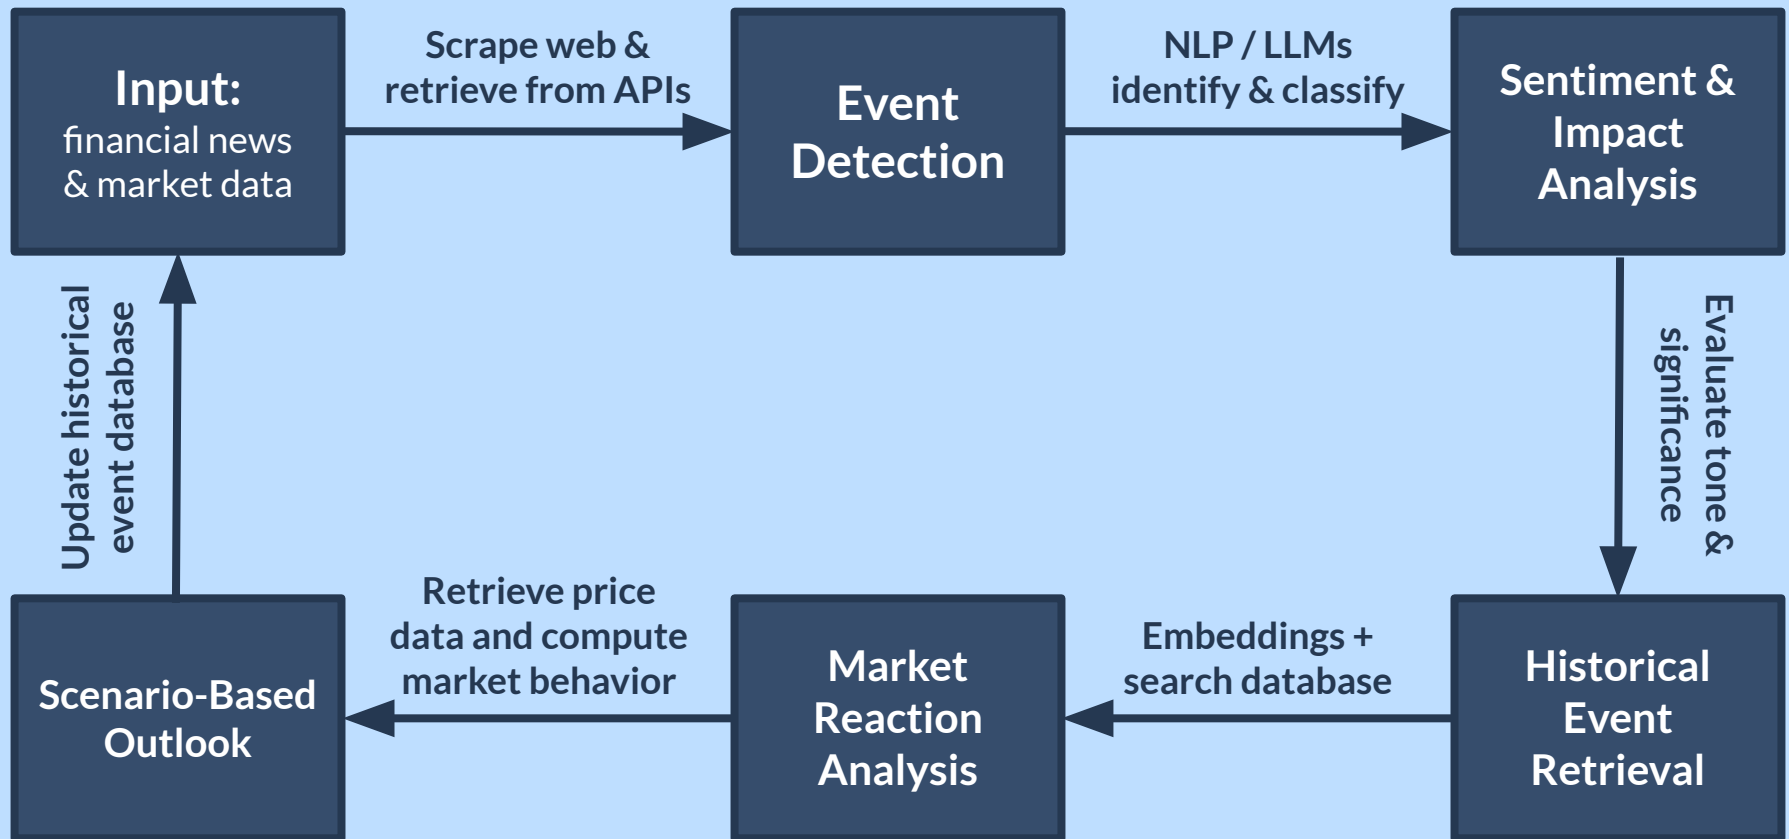

The Insight – The Pain Point

- Difficult to interpret breaking financial news quickly
 - Information overload
 - Ambiguity
 - Lots of variable interactions

The Innovation

- Traditionally, manual research of historical events takes time
- Now efficient and quick due to LLMs & financial data APIs
 - Yahoo Finance
 - Alpha Vantage
 - OpenAI API

Agentic Workflow

Data Sources and APIs

- Financial news feeds (RSS, Yahoo Finance)
- Market data APIs (Alpha Vantage, Finnhub)
- LLM / embeddings for event analysis
- Database + vector search for event retrieval

Believable MVP

- Monitor 20–50 companies
- Extract event + sentiment from news
- Retrieve similar historical events
- Analyze price reaction
- Generate simple scenario summary

High-Level Architecture

- News ingestion pipeline
- Event extraction agent
- Sentiment classification
- Historical event database
- Similarity search engine
- Scenario generation module

Feasibility & Risks

- Event extraction accuracy
- Meaningful historical similarity retrieval
- Market reactions influenced by many variables
- Mitigation: early prototype testing

Evaluation Plan

- Event detection accuracy
- Quality of historical event retrieval
- Human evaluation of outlook usefulness
- System performance logs

The First Two Weeks

- Week 1: build news ingestion pipeline
- Extract company names
- Pull market data
- Week 2: event classification
- Build similarity retrieval prototype

The First Two Weeks

Week 1

- Build news digestion pipeline
- Extract company names
- Pull market data

Week 2

- Event classification
- Build similarity retrieval prototype

Thank You
